MEMORANDUM FOR THE RECORD

SUBJECT: Sewage Disposal At The Headquarters Building

1. Pursuant to the request of the Director of Logistics to reaffirm the treatment given to sewage leaving the Headquarters Building, I contacted Mr. Leidel of the Fairfax Public Works Department. He indicated that their Pinmit Run Treatment Plant was in operation prior to the construction of the Headquarters Building. However, with the additional requirement of the Headquarters Building and other growth in the Langley area, Fairfax County officials made a decision that it would be more economical to close the plant. A pumping station was constructed for the Headquarters Building sewage. The necessary trunk sewers were provided to transport this sewage plus that from the Langley area to Chain Bridge, and on the east side of the bridge, deposit it into the District system. It is then treated by the District in their Blue Plains Plant. The Potomac River receives this sewage in the vicinity of the Woodrow Wilson Bridge. Mr. Leidel stated that it cost the county approximately \$900,000 of its funds to construct the pumping station for us and the necessary trunk sewers to by-pass the Pinmit Run Plant.
2. Currently the General Services Administration pays Fairfax County for metered sewage from our building, and Fairfax County pays the District for treatment of the sewage also on a metered basis.
